

Figures

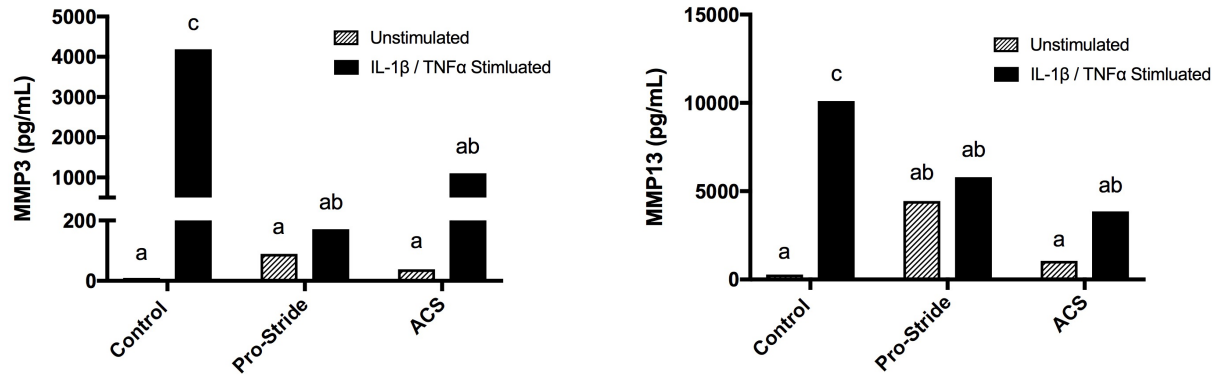

Figure 1. Mean (\pm SEM) MMP3 concentration (a) and MMP13 (b) in culture supernatants 48 hours after pre-treatment with Pro-Stride or ACS and stimulation with IL-1 β (10ng/mL) / TNF- α (1ng/mL). Different letters denote significant differences between groups. $p < 0.05$

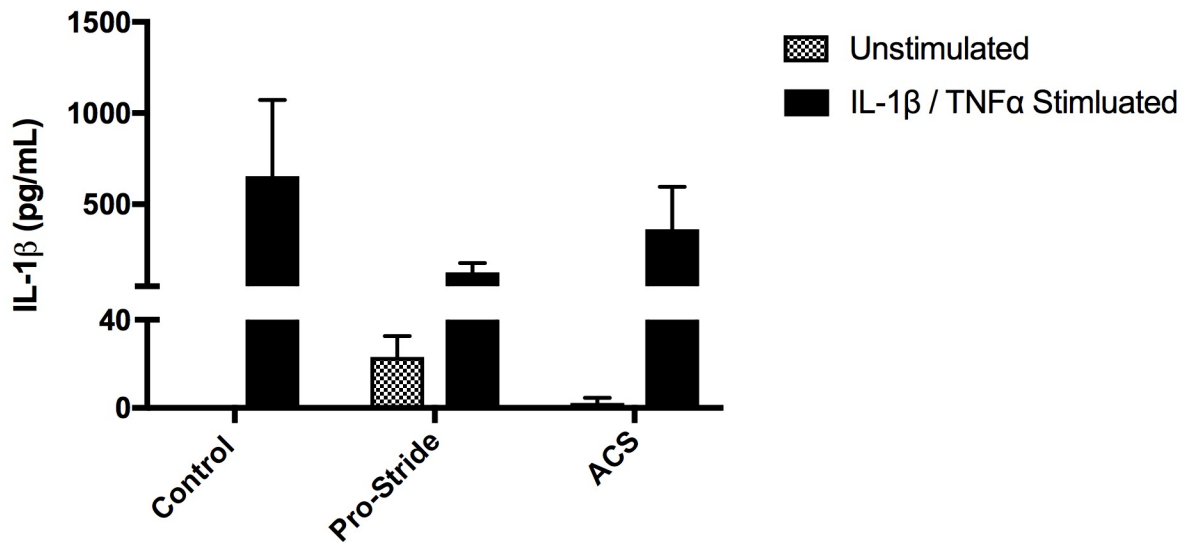

Figure 2. Mean (\pm SEM) IL-1 β concentration in culture supernatants 48 hours after pre-treatment with Pro-Stride or ACS and stimulation with IL-1 β (10ng/mL) / TNF- α (1ng/mL).

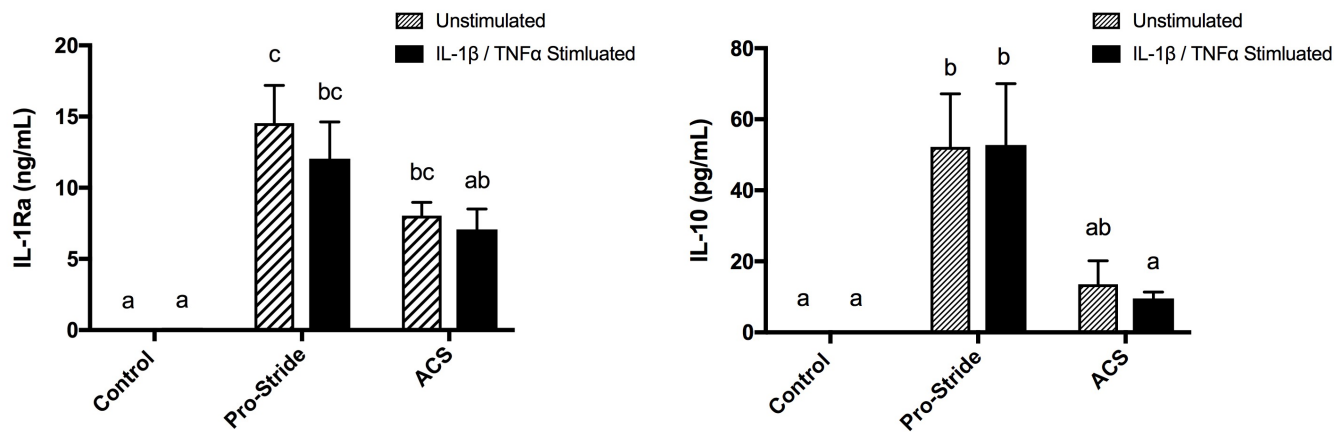

Figure 3. Mean (\pm SEM) IL-10 and IL-1Ra concentrations in culture supernatants 48 hours after pre-treatment with Pro-Stride or ACS and stimulation with IL-1 β (10ng/mL) / TNF- α (1ng/mL). Different letters denote significant differences between groups. $p < 0.05$
